This book is the first to offer a systematic account of the role of language in the development and interpretation of physics. An historical-conceptual analysis of the co-evolution of mathematical and physical concepts leads to the classical/quantum interface. Bohrian orthodoxy stresses the indispensability of classical concepts and the functional role of mathematics. This book analyses ways of extending, and then going beyond this orthodoxy orthodoxy. Finally, the book analyzes how a revised interpretation of physics impacts on basic philosophical issues: conceptual revolutions, realism, and reductionism.

Leads the reader on a delightful and absorbing journey through the ages, on the trail of the elements of the Periodic Table as we know them today. He introduces the young reader to people like Von Helmholtz, Boyle, Stahl, Priestly, Cavendish, Lavoisier, and many others, all incredibly diverse in personality and approach, who have laid the groundwork for a search that is still unfolding to this day. The first part of Wiker's witty and solidly instructive presentation is most suitable to middle school age, while the later chapters are designed for ages 12-13 and up, with a final chapter somewhat more advanced. Illustrated by Jeanne Bendick and Ted Schluenderfritz.

Trivia Why's Differentiation That Really Works

ReAction! gives a scientist's and artist's response to the dark and bright sides of chemistry found in 140 films, most of them contemporary Hollywood feature films but also a few documentaries, shorts, silents, and international films. Even though there are some examples of screen chemistry between the actors and of behind-the-scenes special effects, this book is really about the chemistry when it is part of the narrative. It is about the dualities of Dr. Jekyll vs. inventor chemists, the invisible man vs. forensic chemists, chemical weapons vs. classroom chemistry, chemical companies that knowingly pollute the environment vs. altruistic research chemists trying to make the world a better place to live, and, finally, about people who choose to experiment with mind-altering drugs vs. the drug discovery process. Little did Jekyll know when he brought the Hyde formula to his lips that his personality split would provide the central metaphor that would come to describe chemistry in the movies. This book explores the two movie faces of this supposedly neutral science. Watching films with chemical eyes, Dr. Jekyll is recast as a chemist engaged in psychopharmaceutical research but who becomes addicted to his own formula. He is balanced by the often wacky inventor chemists who make their discoveries by trial-and-error.

Explore the real science behind the Cartoon Network phenomenon Rick and Morty—one of television's most irreverent, whip-smart, and darkly hilarious shows—and discover how close we are to Rick's many experiments becoming a reality. Adult Swim's Rick and Morty is one of the smartest (and most insane) shows on television. Genius alcoholic Rick Sanchez and his hapless grandson Morty have explored everything from particle physics to human augmentation and much more in their intergalactic adventures through the multiverse. With biting humor and plenty of nihilism, Rick and Morty employs cutting-edge scientific theories in every episode. But, outside of Rick's garage laboratory, what are these theories truly about and what can they teach us about ourselves? Blending biology, chemistry, and physics basics with accessible—and witty—prose, *The Science of Rick and Morty* equips you with the scientific foundation to thoroughly understand Rick's experiments from the show, such as how we can use dark matter and energy, just what is intelligence hacking, and whether or not you can really control a cockroach's nervous system with your tongue. Perfect for longtime and new fans of the show, this is the ultimate segue into discovering more about our complicated and fascinating universe.

More than just a coloring book, this inspirational activity book will help you relax, unwind, and enjoy some creative fun while hiding God's Word in your heart. The 35 separate verses and passages are printed in colorable word art with decorative borders, blank on the back to make them easier to remove and frame or display, if desired. Each one is accompanied by two different activities or puzzles featuring the verse or key words from it. Hide it in Your Heart is an ideal Scripture memorization aid for Christian schools, homeschool programs, Sunday schools, or your own personal use. Children and adults will enjoy learning, practicing, and meditating on these artistically presented verses from the New International Version Bible. Proceeds from the sale of *Hide it in Your Heart* will be donated to www.Christar.org to help provide a translation of God's Word for a minority people group in East Asia who do not yet have the Bible in their own language.

UFOs. Aliens. Strange crop circles. Giant figures scratched in the desert surface along the coast of Peru. The amazing alignment of the pyramids. Strange lines of clouds in the sky. The paranormal is alive and well in the American cultural landscape. In *UFOs, Chemtrails, and Aliens*, Donald R.

Prothero and Tim Callahan explore why such demonstrably false beliefs thrive despite decades of education and scientific debunking. Employing the ground rules of science and the standards of scientific evidence, Prothero and Callahan discuss a wide range of topics including the reliability of eyewitness testimony, psychological research into why people want to believe in aliens and UFOs, and the role conspiratorial thinking plays in UFO culture. They examine a variety of UFO sightings and describe the standards of evidence used to determine whether UFOs are actual alien spacecraft. Finally, they consider our views of aliens and the strong cultural signals that provide the shapes and behaviors of these beings. While their approach is firmly based in science, Prothero and Callahan also share their personal experiences of Area 51, Roswell, and other legendary sites, creating a narrative that is sure to engross both skeptics and believers.

Venture into the blackness of space with Dewey D. Whites well-wrought *The Deep, Wide, and Dark*. The science is nothing short of sorcery as an extra-terrestrial humanoid named John Jay Corsey gives mankind a dimensional boost from Einsteins quantum theory for the love of a twenty-year-old stripper. With science heretofore unknown to humans but which was found to be related to the alien spacecraft that crash-landed near Roswell, New Mexico, Corsey becomes the center of a massive project to build the first faster than light starship to take flight into universa incognita searching for

two unearthy elements, but quickly more than rocks are found by the newly-minted Space Marine Corps. Corsey found mankind (specifically the U.S. government) unprepared but willing to build the machine. They jumped right in to the project with the verve and gusto typical of modern man: cobbling together human and extra-terrestrial science to make it a shining reality. On a fenced-in, 200 sq. mile swath of Arizona-New Mexico desert, Sol Base One is built. The nascent masters of the deep, wide, and dark universal empyrean, the Space Marines Corps recruits the best minds and bodies to man the Terrain Explorer, the first starship in human history. The rush to build it becomes a race as world politics views it as an unwise decision and prepares to stymie the ships launch after the Space Marines crafty commandant refuses to reveals the program and its intentions. The next decision made is to launch the mission (425 men on board the Terrain Explorer) before the U.N. could send in inspection teams. And thus, the fate of humanity's first venture into the stars is sealed. Join Capt. Jackson Edison Jed Devlon and the crew of the Terrain Explorer in what promises to be a thrilling, masterful exploration of the possibilities of time and space. Will they land on earth-like worlds such as humanity knows, therefore solidifying the fact of infinite replication in the universe? Who, amongst the extra-terrestrial races will they meet and who will be their friend or enemy? How will they survive? The permutations grip readers with excitement. The writing is riveting in detail and shines with crystal-clear believability. The future is at stake

When a seventy-year-old man named Eddie visits the country of his birth, the Netherlands, nearly fifty years after he has moved to the United States, he has an odd encounter in a flea market. An elderly fellow persuades him to buy an old computer monitor, one that produces shocking images from his past. He does so and unknowingly and drastically changes his life. Eddie takes the old monitor home with him to America, only to be surprised when the man from the flea market arrives on his doorstep with a woman. They are from another dimension and have been observing him since birth. Now they need Eddie's help in order to prevent the destruction of the earth. The beings ask him to join their mission, and in order to make it easier for him, they clone him, giving him a younger body to house his consciousness and bonding him with the woman, whom he now knows as Jane. Their goal: to serve as the technical team that will delay and ultimately curtail global weapons development progress. In this science fiction novel, a man works with two aliens to inhibit nuclear proliferation on earth and save humanity from itself.

Case File: The Second Unsittable Summary: Here at A.L.I.E.N. we believe in strengthening the bonds between humans and intergalactics so that one day all beings can live together on Earth in harmony. That day has not come. But our Associates are working hard to achieve this goal, including Gabby Duran, Associate 4118-25125A, Sitter to the Unsittables. Upon successfully completing her first mission, we have assigned Gabby a more . . . puzzling charge. The relationship between trolls and humans has always been rife with tension, and the troll family Gabby is assigned to is especially prickly. But Gabby is not fazed. Our footage shows Associate 4118-25125A playing, laughing, and snacking with Trymmy, the little troll boy, who seems to be thoroughly enjoying himself. Our liason, Edwina, informed Gabby that trolls love nothing more than a riddle—and stealing items from unsuspecting humans to add to their trove—but Gabby's certain that all this young troll wants is to have fun. However, it might not be as simple as she thinks. After all, there's a reason this particular alien offspring has been labeled "Unsittable."

The Science of Rick and Morty J. Jack Bergeron

What if UFOs are real? Where could they be from, and how could they have traveled here? What advanced technology must they possess to execute the fantastic maneuvers they are routinely reported to make? Astronomer William R. Alshuler takes a fascinating look at the reported attributes of UFOs through the lens of known science and physics and explains how they might be doing the weird and incredible things they are known to do. Along the way, he examines the possibilities and problems of traveling faster than light, interdimensionally, and via teleportation, as well as the veracity of UFO reports, insights into potential alien motives, and alien biochemistry.

Differentiation That Really Works: Science provides time-saving tips and strategies from real teachers who teach science in grades 6-12. These teachers not only developed the materials and used them in their own classes, but they also provided useful feedback and comments about the activities. The strategies included in the book are tiered lessons, cubing, graphic organizers, exit cards, learning contracts, and choice boards. Every strategy includes directions and offers opportunities for differentiation. Grades 6-12

The Periodic Table is largely a memoir of the years before and after Primo Levi's transportation from his native Italy to Auschwitz as an anti-Facist partisan and a Jew. It recounts, in clear, precise, unfailingly beautiful prose, the story of the Piedmontese Jewish community from which Levi came, of his years as a student and young chemist at the inception of the Second World War, and of his investigations into the nature of the material world. As such, it provides crucial links and backgrounds, both personal and intellectual, in the tremendous project of remembrance that is Levi's gift to posterity. But far from being a prologue to his experience of the Holocaust, Levi's masterpiece represents his most impassioned response to the events that engulfed him. The Periodic Table celebrates the pleasures of love and friendship and the search for meaning, and stands as a monument to those things in us that are capable of resisting and enduring in the face of tyranny.

Inside the epic quest to find life on the water-rich moons at the outer reaches of the solar system Where is the best place to find life beyond Earth? We often look to Mars as the most promising site in our solar system, but recent scientific missions have revealed that some of the most habitable real estate may actually lie farther away. Beneath the frozen crusts of several of the small, ice-covered moons of Jupiter and Saturn lurk vast oceans that may have existed for as long as Earth, and together may contain more than fifty times its total volume of liquid water. Could there be organisms living in their depths? *Alien Oceans* reveals the science behind the thrilling quest to find out. Kevin Peter Hand is one of today's leading NASA scientists, and his pioneering research has taken him on expeditions around the world. In this captivating account of scientific discovery, he brings together insights from planetary science, biology, and the adventures of scientists like

himself to explain how we know that oceans exist within moons of the outer solar system, like Europa, Titan, and Enceladus. He shows how the exploration of Earth's oceans is informing our understanding of the potential habitability of these icy moons, and draws lessons from what we have learned about the origins of life on our own planet to consider how life could arise on these distant worlds. Alien Oceans describes what lies ahead in our search for life in our solar system and beyond, setting the stage for the transformative discoveries that may await us.

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. *Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

All of Jack's life, he had experienced many close calls with serious injury or death. They began when he was very young and continued throughout his life. He always believed he was just lucky, but at the age of about twenty, he came to realize God and his angels, indeed, were protecting him. All of the supernatural events that happened to Jack through the years are real. Even as a teenager, he had a premonition of his younger brother's death. For obvious reasons, he only told a few people just bits and pieces of the strange things that had happened to him. He didn't want people to think he was crazy. In fact, for his entire life, he never even told his parents about these experiences. Jack became a very passionate motorcyclist as a means to try to balance the extreme anxiety he often felt as a result of his otherworldly experiences. The many motorcycle trips he took were therapeutic for him in so many ways. Over time, he developed a rather unique theory about the direction mankind was taking and the shape of things to come. More than anything else, this is the story about the ups and downs most people face in life and how having complete trust in God can get you through even the most difficult situations.

Documents how 12 people, as part of a top-secret U.S. government program, traveled to the planet Serpo and lived there for 13 years • Based on the debriefing of the Serpo team and the diary of the expedition's commander • Explains how the aliens helped us reverse-engineer their antigravity spacecraft and develop technology to solve our planet-wide energy problems • Reveals how our government has an ongoing relationship with the Serpo aliens On July 16, 1965, a massive alien spacecraft from the Zeta Reticuli star system landed at the Nevada test site north of Las Vegas. Following a plan set in motion by President Kennedy in 1962, the alien visitors known as the Ebens welcomed 12 astronaut-trained military personnel aboard their craft for the 10-month journey to their home planet, Serpo, 39 light-years away. In November 2005, former and current members of the Defense Intelligence Agency--directed by Kennedy to organize the Serpo exchange program--came forward to reveal the operation, including details from the 3,000-page debriefing of the 7 members of the Serpo team who returned after 13 years on the planet. Working with the DIA originators of the Serpo project and the diary kept by the expedition's commanding officer, Len Kasten chronicles the complete journey of these cosmic pioneers, including their remarkable stories of life on an alien planet, superluminal space travel, and advanced knowledge of alien technologies. He reveals how the Ebens presented the U.S. with "The Yellow Book"--a complete history of the universe recorded holographically, allowing the reader to view actual scenes from pre-history to the present. He explains how the Ebens helped us reverse-engineer their antigravity spacecraft and develop technology to solve our planet-wide energy problems--knowledge still classified. Exposing the truth of human-alien interaction and interplanetary travel, Kasten reveals not only that the Ebens have returned to Earth eight times but also that our government continues to have an ongoing relationship with them--a relationship with the potential to advance the human race into the future.

The accounts given by extraterrestrials in this volume are about events that occurred in our solar system many millions of years ago. In that ancient time the solar system consisted of four planets and four "radiar systems" that orbited the central sun. The four planets of the solar system are known today as Venus, Earth, Mars and a now-totally shattered world that was called Maldec. The term "radiar" applies to the astronomical bodies we presently call Jupiter, Saturn, Uranus and Neptune. The original satellites of these radiars are generally called moons by Earth astronomers, but the extraterrestrials prefer to call them planetoids. This book reflects the personal views of a number of different types of extraterrestrials regarding the state of the local solar system and the state of the Earth.

Who is Andrew Elric, and what's he doing here? Says he's here with answers. As Andrew would explain it, "We live our lives shrouded with mysteries. We're compelled to show faith in explanations that we really don't believe in--the origins of our being, the nature and existence of God, are we alone in the universe? Less weighty issues as well as stuff we'd just like to know--who really shot Kennedy? What happened to Jimmy Hoffa? You think about it and know there really are answers to all of it, but you don't have access to them. I've got those answers and, more importantly, proof for all of it. Some of it you can hold in your hand. You follow the news, you know this place is going to blow. I'm here to try and stop it. Religion, race, nationalism . . . We all come from the same place. But the world has suffered through too many charlatans and false prophets. I'm going to use these proofs to get you savages to settle down." Andrew has recruited renowned attorney, author, and sports agent Aron Samuelson to help him get the word out. Aron, in the throes of a midlife crisis, is looking for the next "big thing" in his life. As they say, be careful what you wish for.

Research & Education Association Research & Education Association (REA) is an organization of educators, scientists, and engineers specializing in various academic fields. Founded in 1959 with the purpose of disseminating the most recently developed scientific information to groups in industry, government, high schools, and universities, REA has since become a successful and highly respected publisher of study aids, test preps, handbooks, and reference works. REA's Test Preparation series includes study guides for all academic levels in almost all disciplines. Research & Education Association publishes test preps for students who have not yet completed high school, as well as high school students preparing to enter college. Students from countries around the world seeking to attend college in the United States will find the assistance they need in REA's publications. For college students seeking advanced degrees, REA publishes test preps for many major graduate school admission examinations in a wide variety of disciplines, including engineering, law, and medicine. Students at every level, in every field, with every ambition can find what they are looking for among REA's publications. While most test preparation books present practice tests that bear little resemblance to the actual exams, REA's series presents tests that accurately depict the official exams in both degree of difficulty and types of questions. REA's practice tests are always based upon the most recently administered exams, and include every type of question that can be expected on the actual exams. REA's publications and educational materials are highly regarded and continually receive an unprecedented amount of praise from professionals, instructors, librarians, parents, and students. Our authors are as diverse as the fields represented in the books we publish. They are well-known in their respective disciplines and serve on the faculties of prestigious high schools, colleges, and universities throughout the United States and Canada. CHAPTER 1 - ABOUT THE SAT II: CHEMISTRY SUBJECT TEST ABOUT THIS BOOK This book provides you with an accurate and complete representation of the SAT II: Chemistry Subject Test. Inside you will find a complete course review designed to provide you with the information and strategies needed to do well on the exam, as well as six practice tests based on the actual exam. The practice tests contain every type of question that you can expect to appear on the SAT II: Chemistry test. Following each test you will find an answer key with detailed explanations designed to help you master the test material. ABOUT THE TEST Who Takes the Test and What Is It Used For? Students planning to attend college take the SAT II: Chemistry Subject Test for one of two reasons: (1) Because it is an admission requirement of the college or university to which they are applying; "OR" (2) To demonstrate proficiency in Chemistry. The SAT II: Chemistry exam is designed for students who have taken one year of college preparatory chemistry. Who Administers The Test? The SAT II: Chemistry Subject Test is developed by the College Board and administered by Educational Testing Service (ETS). The test development process involves the assistance of educators throughout the country, and is designed and implemented to ensure that the content and difficulty level of the test are appropriate. When Should the SAT II: Chemistry be Taken? If you are applying to a college that requires Subject Test scores as part of the admissions process, you should take the SAT II: Chemistry Subject Test toward the end of your junior year or at the beginning of your senior year. If your scores are being used only for placement purposes, you may be able to take the test in the spring of your senior year. For more information, be sure to contact the colleges to which you are applying. When and Where is the Test Given? The SAT II: Chemistry Subject Test is administered five times a year at many locations throughout the country; mostly high schools. To receive information on upcoming administrations of the exam, consult the publication Taking the SAT II: Subject Tests, which may be obtained from your guidance counselor or by contacting: College Board SAT Program P.O. Box 6200 Princeton, NJ 08541-6200 Phone: (609) 771-7600 Website: <http://www.collegeboard.com> Is There a Registration Fee? Yes. There is a registration fee to take the SAT II: Chemistry. Consult the publication Taking the SAT II: Subject Tests for information on the fee structure. Financial assistance may be granted in certain situations. To find out if you qualify and to register for assistance, contact your academic advisor. HOW TO USE THIS BOOK What Do I Study First? Remember that the SAT II: Chemistry Subject Test is designed to test knowledge that has been acquired throughout your education. Therefore, the best way to prepare for the exam is to refresh yourself by thoroughly studying our review material and taking the sample tests provided in this book. They will familiarize you with the types of questions, directions, and format of the SAT II: Chemistry Subject Test. To begin your studies, read over the review and the suggestions for test-taking, take one of the practice tests to determine your area(s) of weakness, and then restudy the review material, focusing on your specific problem areas. The course review includes the information you need to know when taking the exam. Be sure to take the remaining practice tests to further test yourself and become familiar with the format of the SAT II: Chemistry Subject Test. When Should I Start Studying? It is never too early to start studying for the SAT II: Chemistry test. The earlier you begin, the more time you will have to sharpen your skills. Do not procrastinate! Cramming is not an effective way to study, since it does not allow you the time needed to learn the test material. The sooner you learn

the format of the exam, the more comfortable you will be when you take the exam. **FORMAT OF THE SAT II: CHEMISTRY** The SAT II: Chemistry is a one-hour exam consisting of 85 multiple-choice questions. The first part of the exam consists of classification questions. This question type presents a list of statements or questions that you must match up with a group of choices lettered (A) through (E). Each choice may be used once, more than once, or not at all. The exam then shifts to relationship analysis questions which you will answer in a specially numbered section of your answer sheet. You will have to determine if each of two statements is true or false and if the second statement is a correct explanation of the first. The last section is composed strictly of multiple-choice questions with choices lettered (A) through (E). **Material Tested** The following chart summarizes the distribution of topics covered on the SAT II: Chemistry Subject Test.

Topic / Percentage	Number of Questions
Atomic & Molecular Structure	25% / 21 questions
States of Matter	15% / 13 questions
Reaction Types	14% / 12 questions
Stoichiometry	12% / 10 questions
Equilibrium & Reaction Times	7% / 6 questions
Thermodynamics	6% / 5 questions
Descriptive Chemistry	13% / 11 questions
Laboratory	8% / 7 questions

The questions on the SAT II: Chemistry are also grouped into three larger categories according to how they test your understanding of the subject material. **Category / Definition / Approximate Percentage of Test**

- 1) Factual Recall / Demonstrating a knowledge and understanding of important concepts and specific information / 20%
- 2) Application / Taking a specific principle and applying it to a practical situation / 45%
- 3) Integration / Inferring information and drawing conclusions from particular relationships / 35%

STUDYING FOR THE SAT II: CHEMISTRY It is very important to choose the time and place for studying that works best for you. Some students may set aside a certain number of hours every morning to study, while others may choose to study at night before going to sleep. Other students may study during the day, while waiting on line, or even while eating lunch. Only you can determine when and where your study time will be most effective. Be consistent and use your time wisely. Work out a study routine and stick to it! When you take the practice tests, try to make your testing conditions as much like the actual test as possible. Turn your television and radio off, and sit down at a quiet desk or table free from distraction. Make sure to clock yourself with a timer. As you complete each practice test, score it and thoroughly review the explanations to the questions you answered incorrectly; however, do not review too much at any one time. Concentrate on one problem area at a time by reviewing the questions and explanations, and by studying our review until you are confident you completely understand the material. Keep track of your scores. By doing so, you will be able to gauge your progress and discover general weaknesses in particular sections. You should carefully study the reviews that cover your areas of difficulty, as this will build your skills in those areas. **TEST TAKING TIPS** Although you may be unfamiliar with standardized tests such as the SAT II: Chemistry Subject Test, there are many ways to acquaint yourself with this type of examination and help alleviate your test-taking anxieties. Become comfortable with the format of the exam. When you are practicing to take the SAT II: Chemistry Subject Test, simulate the conditions under which you will be taking the actual test. Stay calm and pace yourself. After simulating the test only a couple of times, you will boost your chances of doing well, and you will be able to sit down for the

actual exam with much more confidence. Know the directions and format for each section of the test. Familiarizing yourself with the directions and format of the exam will not only save you time, but will also ensure that you are familiar enough with the SAT II: Chemistry Subject Test to avoid nervousness (and the mistakes caused by being nervous). Do your scratchwork in the margins of the test booklet. You will not be given scrap paper during the exam, and you may not perform scratchwork on your answer sheet. Space is provided in your test booklet to do any necessary work or draw diagrams. If you are unsure of an answer, guess. However, if you do guess - guess wisely. Use the process of elimination by going through each answer to a question and ruling out as many of the answer choices as possible. By eliminating three answer choices, you give yourself a fifty-fifty chance of answering correctly since there will only be two choices left from which to make your guess. Mark your answers in the appropriate spaces on the answer sheet. Fill in the oval that corresponds to your answer darkly, completely, and neatly. You can change your answer, but remember to completely erase your old answer. Any stray lines or unnecessary marks may cause the machine to score your answer incorrectly. When you have finished working on a section, you may want to go back and check to make sure your answers correspond to the correct questions. Marking one answer in the wrong space will throw off the rest of your test, whether it is graded by machine or by hand. You don't have to answer every question. You are not penalized if you do not answer every question. The only penalty results from answering a question incorrectly. Try to use the guessing strategy, but if you are truly stumped by a question, remember that you do not have to answer it. Work quickly and steadily. You have a limited amount of time to work on each section, so you need to work quickly and steadily. Avoid focusing on one problem for too long. **Before the Test** Make sure you know where your test center is well in advance of your test day so you do not get lost on the day of the test. On the night before the test, gather together the materials you will need the next day: - Your admission ticket - Two forms of identification (e.g., driver's license, student identification card, or current alien registration card) - Two No. 2 pencils with erasers - Directions to the test center - A watch (if you wish) but not one that makes noise, as it may disturb other test-takers On the day of the test, you should wake up early (after a good night's rest) and have breakfast. Dress comfortably, so that you are not distracted by being too hot or too cold while taking the test. Also, plan to arrive at the test center early. This will allow you to collect your thoughts and relax before the test, and will also spare you the stress of being late. If you arrive after the test begins, you will not be admitted to the test center and you will not receive a refund. During the Test When you arrive at the test center, try to find a seat where you feel most comfortable. Follow all the rules and instructions given by the test supervisor. If you do not, you risk being dismissed from the test and having your scores canceled. Once all the test materials are passed out, the test instructor will give you directions for filling out your answer sheet. Fill this sheet out carefully since this information will appear on your score report. After the Test When you have completed the SAT II: Chemistry Subject Test, you may hand in your test materials and leave. Then, go home and relax! **When Will I Receive My Score Report and What Will It Look Like?** You should receive your score report about five weeks after you take the test. This report will include your scores, percentile ranks, and interpretive information.
