In Bringing a Corporate Security Culture to Life, presenter Peter Cheviot, former vice president of corporate security for BAX Global Inc., discusses how to build and maintain a corporate security culture that encourages company employees to take ownership of security and facilitates communication. In this 18-minute video presentation of narrated slides, the concept of "security culture" is defined, and Cheviot explains how it can improve the effectiveness of security and risk management programs. Security culture refers to the idea that the security manager must encourage shared ownership of and accountability for the organization's security program among all employees. In this presentation, the ways to achieve a good security culture are outlined. They include impressing the return on investment (ROI) of security services, designating security ambassadors for various functional areas of the business, providing training, connecting with senior management, and sharing security program performance results. When employees and other business stakeholders feel that they have ownership over security policies, the results are higher compliance, return on investment, and net gains through continuous improvements. The tools and recommendations found in Bringing a Corporate Security Culture to Life will help security managers and their teams achieve these results. Bringing a Corporate Security Culture to Life is a part of Elsevier's Security Executive Council Risk Management Portfolio, a collection of real world solutions and "how-to" guidelines that equip executives, practitioners, and educators with proven information for successful security and risk management programs. For decades, corporate security has remained the somewhat sinister stepchild of law enforcement, despite the relatively recent invention of municipal police departments and uniformed peace officers. Regardless, private security - that is, security services provided by individual citizens or commercial businesses - predate federal and municipal protective services by centuries. A fundamental reason for this recent discrepancy in definition, however, rests largely with the perception of the media and municipal officials who suggest that both law enforcement and private security remain relatively interchangeable. They are not; law enforcement and security represent distinct disciplines with their own terms, procedures, and responsibilities. Fourth-Generation Corporate Security: Asymmetrical Warfare for Protective Services Professionals discusses the challenges of fourth-generation warfare (4GW) in the context of private security operations throughout the world, including urban warfare, maritime, and executive protection scenarios. Fourth-Generation Corporate Security (4GCS) cannot be taught - it must be learned through experience and intuition. Accordingly, this offering by R.J. Godlewski provides the foundation upon which the security professional can build his or her repertoire and arsenal in combating the apparitional nature of asymmetrical conflicts.

This book seeks to understand the investigation and settlement of employer/employee disputes within companies. It argues that there is effectively no democratic knowledge about, or control over, corporate security, due to companies' preference for private, out-of-court settlements when faced with norm violations raised by employees. This book fills the knowledge gap by providing an overview of the corporate security sector including legal frameworks and an analysis of the role and powers of private investigative services, inhouse security, forensic accountants and forensic legal investigators. It draws on close observation, case studies and interviews with practitioners in and around the industry. Corporate Investigations, Corporate Justice and Public-Private Relations also looks at public-private relationships in this sector to propose policy remedies applicable to all corporate security providers, regardless of the disparate professional backgrounds and skill-sets of their staff.
