Empires of Flux and Anchor McDougal Littell/Houghton Mifflin

It was a world slowly recovering from a battle between Titanic forces of good and evil. A grand alliance had been formed to fight humanity's battle. For good had not won the final victory. The Nine, rulers of hell, had formed their own empire and planned to invade the world, first subverting humans to their own unholy use.

Heinz Kohut's work represents an important departure from the Freudian tradition of psychoanalysis.

A founder of the Self Psychology movement in America, he based his practice on the belief that narcissistic vulnerabilities play a significant part in the suffering that brings people for treatment. Written predominantly for a psychoanalytic audience Kohut's work is often difficult to interpret.

Siegel uses examples from his own practice to show how Kohut's innovative theories can be applied to other forms of treatment.

Evelyn Underhill was a brilliant scholar who spent many years researching the history and literature of the mystic way. Her book 'Mysticism' was the result of all this endeavour, and has remained the classic in its field, constantly in print since its first publication in 1911. The book is divided into two parts, the first exploring the relationship of mysticism to such diverse subjects as magic, metaphysics, theology and psychology, while Part Two provides a detailed examination of individual mystical consciousness, covering the soul's steps to illumination. This pioneering study comes with a comprehensive annotated bibliography, allowing present-day students to find the primary texts described with such clarity in Underhill's seminal work.

This book gives a rigorous treatment of selected topics in classical analysis, with many applications and examples. The exposition is at the undergraduate level, building on basic principles of advanced calculus without appeal to more sophisticated techniques of complex analysis and Lebesgue integration. Among the topics covered are Fourier series and integrals, approximation theory, Stirling's formula, the gamma function, Bernoulli numbers and polynomials, the Riemann zeta function, Tauberian theorems, elliptic integrals, ramifications of the Cantor set, and a theoretical discussion of differential equations including power series solutions at regular singular points, Bessel functions, hypergeometric functions, and Sturm comparison theory. Preliminary chapters offer rapid reviews of basic principles and further background material such as infinite products and commonly applied inequalities. This book is designed for individual study but can also serve as a text for second-semester courses in advanced calculus. Each chapter concludes with an abundance of exercises. Historical notes discuss the evolution of mathematical ideas and their relevance to physical applications. Special features are capsule scientific biographies of the major players and a gallery of portraits. Although this book is designed for undergraduate students, others may find it an accessible source of information on classical topics that underlie modern developments in pure and applied mathematics.

Refreshing and revealing in equal measure, this innovative volume conducts a critical/self-critical exploration of the impact of culture on the ill-fated Oslo peace process. The authors negotiators and scholars alike demolish stereotypes as they construct an unusually subtle and sophisticated understanding of how culture influences negotiating styles. Culture, they argue, did not cause the Oslo breakdown but it did play an influential, intervening role at several levels: coloring the thinking of political leaders, shaping domestic politics on both sides, and affecting each side's evaluation of the other's beliefs and intentions. After an overview by William Quandt of the history of the Oslo process and the impact of international factors such as U.S. mediation, the volume presents a detailed analysis of first Palestinian, and then Israeli negotiating styles between 1993 and 2001. Omar Dajani, a former legal advisor to the Palestinian team, explains how elements of Palestinian identity and national development have hobbled the Palestinians' ability to negotiate effectively. Aharon Klieman, a distinguished Israeli analyst, traces a long-standing clash between diplomatic and security subcultures within the Israeli political elite and reveals how Israeli identity has helped create a negotiating style that opts for short-term gains while undermining the prospects for a lasting agreement. Drawing on these insights, Tamara Wittes concludes the volume by offering not only a fresh appreciation of culture's influence on interethnic negotiations but also lessons for future negotiators in the Israeli-Palestinian conflict. Read the review from Foreign Affairs."

This book addresses a wide range of basic and clinical issues in the physiology and pharmacology of growth hormone. The volume is organized like a textbook. It begins with factors contributing to GH gene expression, the functional relationships of the GH receptor, molecular biological analysis of the GH-GH receptor complex and proceeds to describe the insulin-like growth factor axis. Transgenic models are discussed for analysis of discrete effects. These discussions provide a bridge to clinically oriented discussions of growth abnormalities in GH deficient children, GH insensitivity due to deficiency of the GH receptor, and the concept of aging as a GH/IGF-I deficiency state. Discussions also include the immune system as a source and a responder to GH, GHRH, IGF-I and the effects of GH excess.
