Transnational organized crime interferes with the everyday lives of more and more people - and represents a serious threat to democracy. By now, organized crime has become an inherent feature of economic globalization, and the fine line between the legal and illegal operation of business networks is blurred. Additionally, few experts could claim to have comprehensive knowledge and understanding of the laws and regulations governing the international flow of trade, and hence of the borderline towards criminal transactions. This book offers contributions from 12 countries around the world authored by 25 experts from a wide range of academic disciplines, representatives from civil society organizations and private industry, journalists, as well as activists. Recognizing the complexity of the issue, this publication provides a cross cultural and multi-disciplinary analysis of transnational organized crime including a historical approach from different regional and cultural contexts.

This book aims at finding some answers to the questions: What is the influence of humans in controlling CAD and how much is human in control of its surroundings? How far does our reach as humans really go? Do the complex algorithms that we use for city planning nowadays live up to their expectations and do they offer enough quality? How much data do we have and can we control? Are today's inventions reversing the humanly controlled algorithms into a space where humans are controlled by the algorithms? Are processing power, robots for the digital environment and construction in particular not only there to rediscover what we already knew and know or do they really bring us further into the fields of constructing and architecture? The chapter authors were invited speakers at the 6th Symposium "Design Modelling Symposium: Humanizing Digital Reality", which took place in Ensa-Versailles, France from 16 - 20 September 2017.

Springer Handbook of Mechanical Engineering Psychology Press During 2004, oil prices reached levels unprecedented in recent years. Although world oil markets remain adequately supplied, high oil prices reflect increasingly uncertain conditions, and many countries are considering ways to improve capacity to handle market volatility and possible supply disruptions in the future. In light of these concerns, this publication sets out a new quantitative assessment of the potential oil savings and costs of rapid oil demand restraint measures for transport, useful for both large-scale disruptions, and for smaller, localised supply disruptions in individual countries. It examines potential approaches for rapid uptake of measures such as telecommuting, ecodriving, and car-pooling; as well as discussing methodologies for adapting policy measures to national circumstances.

There are approximately 4,000 fatalities in crashes involving trucks and buses in the United States each year. Though

estimates are wide-ranging, possibly 10 to 20 percent of these crashes might have involved fatigued drivers. The stresses associated with their particular jobs (irregular schedules, etc.) and the lifestyle that many truck and bus drivers lead, puts them at substantial risk for insufficient sleep and for developing short- and long-term health problems. Commercial Motor Vehicle Driver Fatigue, Long-Term Health and Highway Safety assesses the state of knowledge about the relationship of such factors as hours of driving, hours on duty, and periods of rest to the fatigue experienced by truck and bus drivers while driving and the implications for the safe operation of their vehicles. This report evaluates the relationship of these factors to drivers' health over the longer term, and identifies improvements in data and research methods that can lead to better understanding in both areas.

The very essence of meditation is finding peace within the chaos that enshrouds us all in our daily lives, and if we can just get ourselves to look at that daunting word a little bit differently, we will come to see that we don't need to have that sacred temple or shrine wherein we seek to cast aside our thoughts and enter the blissful state of no mind we so desperately seek to attain. In this book you will learn all about the techniques that you will be able to use most effectively where it comes to performing meditation anywhere and anytime. You will come to see that what you once believed was a task best left to rishis and sages in the mystical Himalayas, is really something you can perform with the utmost ease, several times a day.

Climate change is mainly caused by emissions of CO2 from burning fossil fuels, which provides over 85% of the world's energy. Strategies for mitigating climate change are connected with handling economic and social activities through their effects on the use of energy. Climate Change Mitigation investigates the costs of mitigation measures in comparison to their benefits, and compares the effects of implementing mitigation measures on various areas such as energy security and energy economy. "For 20 years, diplomats have struggled to make progress on climate change, mostly because global diplomacy is not well-linked to the realities of how nations and firms control emissions and adapt to the impacts of a changing climate. In this excellent book, Dr Yamaguchi has assembled experts to guide the redesign of global policy. The authors underscore how global warming efforts must resonate with other policy goals." David G. Victor, Director, Laboratory on International Law and Regulation and Professor, University of California San Diego "Climate Change Mitigation clarifies that climate change cannot be controlled by sacrificing economic growth or other global problems; however, action to control climate change cannot be delayed. Climate policy is pervasive and affects all dimensions of international policy; but it cannot be too ambitious: a balanced approach between mitigation and adaptation, economic growth and resource management, and short term development and long term investments, should be adopted. I recommend its reading." Carlo Carraro, President, Ca' Foscari University of Venice "The International Energy Agency estimates for every \$1 of investment now toward sustainable energy, \$4 of future spending can be saved. There is a business case for companies to reduce energy use. Companies in the energy and resource intensive industries must lead the way." Chad Holliday, Chairman. World Business Council for Sustainable Development and former Chair and CEO, DuPont

The chapters in this volume were presented at the July-August 2008 NATO Advanced Study Institute on Unexploded Ordnance Detection and Mitigation. The conference was held at the beautiful Il Ciocco resort near Lucca, in the glorious Tuscany region of northern Italy. For the ninth time we gathered at this idyllic spot to explore and extend the reciprocity between mathematics and engineering. The dynamic interaction between world-renowned scientists from the usually disparate communities of pure mathematicians and applied scientists which occurred at our eight previous ASI's continued at this meeting. The detection and neutralization of unexploded ordnance (UXO) has been of major concern for very many decades; at least since the First World war. UXO continues to be the subject of intensive research in many fields of science, including mathematics, signal processing (mainly radar and sonar) and chemistry. While today's headlines emphasize the mayhem resulting from the placement of improvised explosive devices (IEDs), humanitarian landmine clearing continues to draw significant global attention as well. In many countries of the world, landmines threaten the population and hinder reconstruction and fast, efficient utilization of large areas of the mined land in the aftermath of military conflicts.

How well did civilian morale stand up to the pressures of total war and what factors were important to it? This book rejects contentions that civilian morale fell a long way short of the favourable picture presented at the time and in hundreds of books and films ever since. While acknowledging that some negative attitudes and behaviour existed—panic and defeatism, ration-cheating and black-marketeering—it argues that these involved a very small minority of the population. In fact, most people behaved well, and this should be the real measure of civilian morale, rather than the failing of the few who behaved badly. The book shows that although before the war, the official prognosis was pessimistic, measures to bolster morale were taken nevertheless, in particular with regard to protection against air raids. An examination of indicative factors concludes that moral fluctuated but was in the main good, right to the end of the war. In examining this phenomenon, due credit is accorded to government policies for the maintenance of morale, but special emphasis is given to the 'invisible chain' of patriotic feeling that held the nation together during its time of trial.
