crucial element in the determination of combat objectives particularly to triumph in conflict with a competent adversary. By so, it concerns the access to resources, weaponry and technology to enable victory in conflict. Under threat or attack, the accuracy of information is crucial for the correct movement of resources between different points, either effectively forward or reversely, but with deliberate control at all times. With reason of, information given the correct use, control or manipulation is a powerful tool. Even in very simple modes; information is recognised as a force influencing societies or organisations. The share of logistics in the Ministry of Defence expenditures is 25 percent of operating costs, with £4.5 billion into the supply pipeline responding about 200 million demands annually and across 11000 locations worldwide. On the average, the yearly spend over US\$17b recognises logistics operation of 30,000 people across six agencies, where 75percent are civilians. The registered asset worth across 80 international locations amounts US\$41b. The core supply chain components for defence logistics comprised traditional tangible

Germany is repeatedly described as the logistics world champion. How does one become the logistics world champion and what happens behind the scenes? This report based on experience inside logistics. It is seldom that one can hear the conversations and things that happen in the booth or in the background. Here you do. For many, listening at the door would be just as exciting as the football match itself. Here we provide the logistics door in front of you, come in. A look behind the scenes invites you to create transparency from its unvarnished side. Click here for

logistics in Germany. What it's all about comes out unembellished: communication and precision, hard work and passion, but also lapses and nagging. In addition, Thrill can be used to gain insights: How ready are the digital instruments? How do project managers and logistics experts interact? How do you all sense the right steps? In the comfortably furnished reading corner you can experience at close quarters how the everyday work of projects and logistics managers in Germany is organized. The World Bank, which calculates the "Logistics Performance Index", focuses on six factors: customs clearance, infrastructure, service quality, the price of international shipments, the possibilities of tracking and tracing and the frequency with which goods reach their destination on time. Sweden, Belgium, Austria and Denmark are good neighbors in the top 10 of the ranking. With a market volume of 278 billion euros, Germany is the largest logistics market in Europe. Nothing works without logistics management. What other effects do events like Brexit & Co have? Is "me first" thinking becoming an epidemic? Is it the rapidly fluctuating fever curves of

international trade policy? Perhaps it is the many "frenemies". It is precisely the relationships between people that are made up of "friend" and "enemy". In German we use friend-enemy or ironically party-friend. The latter are just as important as climate protection, yellow vests or car-free city centers. If you look at it yourself. It won't be difficult if you break it down to your own environment. In the following text, each keyword allows you to project it up or down. Try it on the terrain of logistics! Count the "frenemies" in the book. Afghanistan is unfortunately in last place in the above-mentioned ranking. Many African as well as Central and South American states stay under the last 40 of 160 countries. What would such a report on experiences there or in other countries look like? How does the logistical thinking differ in each case? How can experience knowledge be used? Is mutual projection ideally successful? Transparency creates acceptance! That is my motto. From this point of view, I look at corners and angles that shape logistics in full awareness or in hidden logistics. With my knowledge book I show new ways that offer well-dosed enlightenment. Ideally, the projection onto

one's own experiences is successful. In this sense, the title "Business Sparring Logistics" can certainly be understood as a quintessence. As it should be, it only crossed my mind at the end of my work. She invites you to talk! An exchange of blows is within the realm of possibility. Have courage! If there is your need for a conversation? I am at your disposal as sparring partner.

The purpose of this MBA project is to provide a critical review of Naval Expeditionary Combat Command (NECC) logistics support processes. By tracing the MK-16 underwater breathing apparatus, a critical piece of hardware to the NECC explosive ordnance disposal (EOD) mission, through the complicated expeditionary logistics (EXLOG) supply chain, this report highlights areas of friction across various supply processes. These include inefficiencies related to IT network connectivity, redundancies in human data input processes, and shortcomings in the overall IT infrastructure, to include financial improvement and audit readiness (FIAR)

compliance. Specifically, NECC inventory and logistics refers to the materials, equipment, activities, and resources needed to properly adhere to doctrine and execute required mission tasking. A review of current inventory and logistics processes provides a baseline and affords the opportunity to apply IT improvement recommendations, enabling a more robust quantitative analysis of EXLOG data. While there are many books written on the basics of the "supply" side of the supply chain (i.e. strategic sourcing,

sourcing/procurement, and purchasing), there hasn't been much written on those areas from a Lean perspective. Considering that supply chain costs, primarily procurement and transportation, can range from 50 to 70% of sales, it's surprising that this area has not been fully explored. As a result, some companies tend to place too much emphasis on the traditional focus of reducing material costs instead of process improvement. Lean Demand-Driven Procurement: How to Apply Lean Thinking to Your Supply Management Process details the basic supply management concepts and processes (i.e. sourcing, procurement, and purchasing) in an easy-to-understand format in combination with various process improvement tools, methodologies, best practices, examples, and cases written from a Lean perspective. It focuses and pinpoints ways to identify waste on the supply side through improved processes and, in some cases, technology. Applying Lean principles to procurement and purchasing processes identifies non-traditional sources of waste, and in some cases, creates a paradigm shift that results in additional

benefits to the entire supply chain.
