...a message to the Black Youth. This is a compilation of individual essays written during the summer-fall of 1992. The essays are designed to inspire thought within the Black Mind. These writings are primarily targeted toward the Black Youth of this day, of which I am a part of. I am not a Master of these teachings, but these teachings I wish to Master. They say that my generation is not intelligent enough to read a book. I say that They are wrong. It is just that They are not writing about anything of interest that is relevant to our lives! And when They do write something, they have to write in the perfect King's English to impress their Harvard Professors! Here we are with a book in one hand, and a dictionary in the other, trying to understand what in the hell the author is talking about! If you have got something to say, just say it! We are not impressed by your 27-letter words, or your Shakespearian style of writing. The Black Youth of today don't give a damn about Shakespeare!!! This ain't no damn poetry contest! We are dealing with the life, blood, and salvation of our entire Black Nation! If you want to reach the People, you have to embrace us where we are, and then take us where we need to go. So, these writings are from my generation and for my generation with respect and love. If no one will teach, love and guide us, then we will teach love and guide ourselves. Peace.

Internetworking Protocol (IP) addresses are the unique numeric identifiers required of every device connected to the Internet. They allow for the precise routing of data across very complex worldwide

internetworks. The rules for their format and use are governed by the Internet Engineering Task Force (IETF) of the The Internet SOCIety (ISOC). In response to the exponential increase in demand for new IP addresses, the IETF has finalized its revision on IP addressing as IP Version 6, also known as IPv6 (ng = Next Generation). Key hardware vendors such as Cisco and major Internet Service Providers such as America Online have already announced plans to migrate to IP Version 6. IP address allocation within an organization requires a lot of long-term planning. This timely publication addresses the administrator and engineer's need to know how IP 6 impacts their enterprise networks. Easy-to-read, light technical approach to cellular technology Ideal for companies planning a phased migration from IP 4 to IP 6 Timely publication: The IETF standard was finalized in early 1999 and will begin to be implemented in late 1999/2000. The current IP Version 4 address set will be exhausted by 2003 The book focuses on planning and configuring networks and devices for IP 6. Specifically, it will cover how to: Increase the IP address size from 32 bits to 128 bits; Support more levels of addressing hierarchy; Support an increased number of addressable nodes; Support simpler auto-configuration of addresses; Improve the scalability of multicast routing by adding a "scope" field to multicast addresses; Use a new "anycast address" to send a packet to any one of a group of nodes
