Investing in the Health and Well-Being of Young Adults Routledge

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual

rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common

knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Currently, there are over 400,000 youth living in foster care in the United States, with over 20,000 aging out of the child welfare system each year. Foster youth are more prone to experience short- and long-term adverse developmental outcomes including diminished academic achievement and career opportunities, poor mental and overall health, financial struggles, homelessness, early sexual intercourse, and substance abuse, many of these outcomes are risk factors for involvement in the juvenile justice system. Despite their challenges, foster youth have numerous strengths and positive assets that carry them through their journeys, helping them to overcome obstacles and build resilience. The *Handbook of Foster Youth* brings together a prominent group of multidisciplinary experts to provide nuanced insights on the complex dynamics of the foster care system, its impact on youth's lives, and the roles of institutions and policies in the foster system. It discusses current gaps and future directions as well as recommendations to advance the field. This book provides an opportunity to reflect on the many challenges and strengths of foster youth and the child welfare system, and the combined efforts of caregivers, community volunteers, policy makers, and the professionals and researchers who work with them.

Special education is now an established part of public education in the United States—by law and by custom. However, it is still widely misunderstood and continues to be dogged by controversies related to such things as categorization, grouping, assessment, placement, funding, instruction, and a variety of legal issues. The purpose of this 13-part, 57-chapter handbook is to help profile and bring greater clarity to this sprawling and growing field. To ensure consistency across the volume, chapter authors review and integrate existing research, identify strengths and weaknesses, note gaps in the literature, and discuss implications for practice and future research. Key features include: Comprehensive Coverage—Fifty-seven chapters cover all aspects of special education in the United States including cultural and international comparisons. Issues & Trends—In addition to synthesizing empirical findings and providing a critical analysis of the status and direction of current research, chapter authors discuss issues related to practice and reflect on trends in thinking. Categorical Chapters—In order to provide a comprehensive and comparative treatment of the twelve categorical chapters in section IV, chapter authors were asked to follow a consistent outline: Definition, Causal Factors, Identification, Behavioral Characteristics, Assessment, Educational Programming, and Trends and Issues. Expertise—Edited by two of the most accomplished scholars in special education, chapter authors include a carefully chosen mixture of established and rising

young stars in the field. This book is an appropriate reference volume for anyone (researchers, scholars, graduate students, practitioners, policy makers, and parents) interested in the state of special education today: its research base, current issues and practices, and future trends. It is also appropriate as a textbook for graduate level courses in special education.

New Roles for Youth in the School and the Community National Council of Teachers

More than 2 million adults are incarcerated in U.S. prisons, and each year more than 700,000 leave federal and state prisons and return to communities. Unfortunately, within three years, 40 percent will be reincarcerated. One reason for this is that ex-offenders lack the knowledge, training, and skills to support a successful return to communities. Trying to reduce such high recidivism rates is partly why states devote resources to educating and training individuals in prison. This raises the question of how effective -- and cost-effective -- correctional education is: an even more salient question given the funding environment states face from the 2008 recession and its continuing aftermath. With funding from the Second Chance Act of 2007, the Bureau of Justice Assistance, U.S. Department of Justice, asked RAND to help answer this question as part of a comprehensive examination of the current state of correctional education for incarcerated adults and juveniles. The RAND team conducted a systematic review of correctional education programs for incarcerated adults and juveniles. This included a meta-analysis on correctional education's effects on recidivism and postrelease employment outcomes for incarcerated adults, as well as a synthesis of evidence on programs for juveniles. The study also included a nationwide survey of state correctional education directors to understand how correctional education is provided today and the recession's impact. The authors also compared the direct costs of correctional education with those of

reincarceration to put the recidivism findings into a broader context.

Youth violence is a significant public health problem that affects thousands of young people each day, and in turn, their families, schools, and communities. Youth violence occurs when young people between the ages of 10 and 24 years intentionally use physical force or power to threaten or harm others. This illustrated technical package provides an overview about youth violence and evidence-based strategies for community leaders, families, school administrators, teachers, law enforcement, and state leaders to utilize as methods for youth violence prevention. Some example strategies include: Preschool enrichment with family engagement and parent education Mentoring/After School programs Hospital community partnership programs Youth volunteer opportunities While individual skills are important and research has demonstrated the preventive effects of many youth skill development programs, approaches addressing relationships with parents, peers, and other caring adults as well as approaches that influence school and community environments are equally important to have the greatest public health impact.
