This paper discusses key findings of the annual progress report on implementing the National Economic Empowerment and Development Strategy (NEEDS)—Nigeria's Poverty Reduction Strategy Paper. The progress report highlights key accomplishments and shortcomings as well as outstanding issues. Key macroeconomic indicators improved during the last years, reflecting the authorities' attention to macroeconomic management, an

improved policy framework, and favorable external environment. Non-oil growth was robust, and despite unrest in the Niger Delta, oil production could fully fill the OPEC quota. The budgetary oil price rule was an essential anchor of fiscal policy.

The volume is dedicated to Professor David Elworthy to celebrate his fundamental contribution and exceptional influence on stochastic analysis and related fields. Stochastic analysis has been profoundly developed as a vital fundamental research area in mathematics in recent decades. It has been discovered to have intrinsic connections with many other areas of mathematics such as partial differential equations, functional analysis, topology, differential geometry, dynamical systems, etc. Mathematicians developed many mathematical tools in stochastic analysis to

understand and model random phenomena in physics, biology, finance, fluid, environment science, etc. This volume contains 12 comprehensive review/new articles written by world leading researchers (by invitation) and their collaborators. It covers stochastic analysis on manifolds, rough paths, Dirichlet forms, stochastic partial differential equations, stochastic dynamical systems, infinite dimensional analysis, stochastic flows, quantum stochastic analysis and stochastic Hamilton Jacobi theory. Articles contain cutting edge research methodology, results and ideas in relevant fields. They are of interest to research mathematicians and postgraduate students in stochastic analysis, probability, partial differential equations, dynamical systems, mathematical physics, as well as to physicists, financial mathematicians, engineers, etc.

**Molecular Ecology of Biofilms** World Scientific Retired Navy SEAL, Clint Backwater, enjoys his solitary life as owner of the Ask Questions Later gun range. It's the kind of place you find because you know a guy. So when Leila Ortiz, a petite woman with a "baby on board" sticker on the back of her car—and an 18-month-old boy in her arms—shows up at the range, panicked and desperate for a gun, he knows something is wrong. Having grown up in the foster system, Clint has seen what happens when you let yourself get too invested—things get messy, people leave. He made himself a promise to never get emotionally involved again, but the former SEAL in him feels the tug to help this woman and her child. Leila's ex-husband is being released from prison early on good behavior and she found out too late. He was supposed to serve five years, not two, and Leila is unprepared to protect herself and her son. She promised him they'd never run again—they've made a nice life for themselves and the last thing she wants to do is

leave it all behind. When Clint refuses to give Leila a gun without lessons, she agrees to return to the range to learn. At first, Leila won't say why she's so desperate for protection, but when the threats from her ex escalate, it becomes clear what she's afraid of. Clint is a loner. Always has been, always will be. So when Leila and her little son enter his life, it hits him—hard— maybe being alone isn't what he needs. Still, having his solitary life disrupted when he invites the little family into his home is a bit tougher to take than he thought. With Leila and her son in danger, though, he'll do whatever it takes to keep them safe—even putting up with stray toys and changing a nappy or two. But the biggest danger might be to his heart, when it starts to look like the safest thing for Leila and her baby might be to leave her problems—and her budding relationship with Clint—behind.

Take New York by storm and steer clear of serious relationships. That's the plan. That's the goal. It's easy too, now that my software company is making headlines.

Nothing is getting in the way of that--not even my sexy personal trainer. I don't care how beautiful and intriguing she is. Mel Dawson keeps talking me into doing things, like watching the sunset and slowing down to enjoy life. When she trains me, and I watch her body, I'm constantly fantasizing about exploring every inch of it all night long, claiming her mouth every time she gives me a sassy reply. I don't even know who I am when I'm with her. I'm suddenly a completely different man. But, I like this version of myself better. Mel's smart, determined, and keeps me guessing. She's everything I need and want, but I've been burned before. I'm used to taking chances in the boardroom, just not in my personal life. How much am I willing to risk for a chance to make her mine?

Micro and Nano Flow

Systems for Bioanalysis addresses the latest developments in biomedical engineering at very small scales. It shows how organic systems require multi-scale understanding in the broadest sense whether the approach is experimental or mathematical, and whether the physiological state is healthy or diseased. Micro-and nano-fluidics represent key areas of translational research in which state-of-the-art engineering processes and devices are applied to bedside monitoring and treatment. By applying conventional micro- and nano-engineering to complex organic solids, fluids, and their interactions, leading researchers from throughout the world describe methods and techniques with great potential for use in medicine and clinical practice. Coverage includes the seeming plethora of new, fine-scale optical methods for measuring blood flow as well as endothelial activation and interaction with tissue. Generic areas of modeling and bioelectronics are also considered. In keeping with the recurring theme of medicine and clinical

practice, approximately half of the chapters focus on the specific application of micro- and nano- flow systems to the understanding and treatment of cancer and cardiovascular diseases. This book developed from an Expert Overview Session on "Micro & Nano Flows in Medicine: the way ahead" at the 3rd Micro and Nano Flows Conference (MNF2011) held in Thessaloniki, Greece. Additional chapters were included to enhance the international, state-of-the-art coverage.

This book collects some of the papers presented at the conference as well as other essays contributed by the many friends and collaborators who wanted to honor Ludwig Streit's scientific career and personality. The contributions cover many aspects of contemporary mathematical physics. Of particular importance are new results on infinite-dimensional stochastic analysis and its applications to a wide range of physical

domains. "Negotiation: Science and Practice" is a university-level textbook and lecture series designed to teach effective skills and techniques in negotiation. It provides scientifically tested tools that allow

anyone to construct and implement the best possible negotiation strategies, in any negotiation scenario. From this pack, students, like yourself, learn the art, science and practice of influence, as well as how to construct optimal agreements, whether you are negotiating a settlement in a legal dispute, a contract to sell a business, a ceasefire in a conflict zone, the sale of your own home, a price rise of the goods or services your company provides, a wage dispute with a powerful union or even an amendment to legislation. The lectures in this textbook are as follows: Lecture 1: Negotiation dynamics (available in full, for free, in the "sample") Lecture 2: Preparation for negotiation Lecture 3: Evaluation techniques Lecture 4: Influence Lecture 5: Cognitive biases, heuristics, errors and effects Lecture 6: Group dynamics Lecture 7: Logic and creativity Lecture 8: Parachutes, problems and tricks Lecture 9: Culture, human nature and individual difference Lecture 10: Enforcement mechanisms Lecture 11: Ethics, lying,

the law and why good people do bad things  
Lecture 12: Alternative dispute resolution  
Lecture 13: Conflict  
This book contains: - A comprehensive lecture series (outlined above) - Week-by-week multiple choice questions (100+ pages) - Detailed answers and explanations to all week-by-week questions (50+ pages) - A mid-semester exam - A comprehensive reference glossary (200 pages) - Full academic abstracts to complement critical references (aiding a more detailed understanding and facilitating further exploration of the science behind each technique) - The most comprehensive examination of the psychology of negotiation available, with clear examples of how it can be used to achieve desired outcomes - The most comprehensive description of common "dirty tricks" in negotiation and how to respond to them - Detailed explanations of the law and how it affects you as a negotiator; including important case summaries - Step-by-step explanations of how to calculate the 'need-to-know' numbers in all negotiations
