"Fitrah: Man's Natural

Disposition" is a translation of the Persian book "Fi?rat" by the great Muslim thinker and reformer, Ayatollah Murtada Mutahhari. "Fitrah" is the theme of a 10-session lecture series given the martyred thinker in 1976-77. With ample citations from the Qur'an and other traditional Islamic sources, Mutahhari discusses the concept of 'fitrah' or man's natural disposition. The author does not confine himself to Islamic references as he continuously engages with the views of a wide range of philosophers including Plato, William James, Russell, Nietzsche, Marx, Feuerbach, Auguste Comte, Spencer, Will Durant, and Durkheim, among others. Mutahhari's ontological discussion covers a range of issues, including the literal and technical meaning of 'fitrah', sacred inclinations, love and worship, and the evolution of human originality. He also examines materialism and provides a theistic approach to some issues pertaining to the theories on the origin of religion, the evolution of human society, intrinsic and acquired guidance, and intuitive and sensory dispositions. This book lays

a significant interconnected and deep foundation in Islamic theology and an understanding of human psychology, sociology and anthropology fully supported by the holy Quran, ahadith, logic and philosophy. The reader will leave with a holistic understanding of Islam and a true connection with the Almighty (SWT) through one own self.

Marine Diesel Engines

Oxford University Press, USA

For millennia, humans well-knew that there was a force far more powerful than they upon the Earth, and that was Nature itself. They could only dream of overcoming its power, or

try to believe in the myths and fables of others who supposedly had done so. Then, at the dawn of the 19th century, along came a brilliant, creative, controversial American by the name of Robert Fulton. In the late summer of 1807, he ran his experimental "steamboat" from New York City to Albany, not once, but repeatedly. With these continuing commercial trips, Fulton showed that it was possible to alter artificially both a person's location and the amount of time it took to change it. In so doing, he also broke through an enormous psychological barrier that had existed in people's minds; it was, in fact, possible to overcome Nature to practical effect. But running these steamboats on rivers, lakes and bays was one thing. Taking such a vessel on a voyage across the ocean was a different proposition altogether. Experienced mariners didn't think it could be done. These early steamboats were just too flimsy and unwieldy to withstand the dangers of the deep. Yet there was at least one man who believed otherwise. His name was Captain Moses Rogers. He set out to design a steam vessel

that was capable of overcoming the vicissitudes of the sea. This craft would be not a steamboat, but a steamship, the first of its kind. Finding a crew for such a new-fangled contraption proved to be exceedingly difficult. Mariners--conditioned as they were to "knowing the ropes" of a sailing ship--looked upon this new vessel, and its unnatural means of propulsion, with the greatest suspicion. To them, it was not a "Steam Ship"--instead, it was a "Steam Coffin."
